- 2 Configuration** **3**
 - 2.1 Configuration Parameters 3
 - 2.2 Default config file 3
- 3 Running** **7**
- 4 REST API** **9**

INSTALL

Prerequisites

- ant 1.82 or newer
- git
- java 8 or newer
- maven 3.03 or newer
- svn 1.6 or newer

First, install Kepler development trunk from svn:

```
mkdir kepler.modules
cd kepler.modules
svn co https://code.kepler-project.org/code/kepler/trunk/modules/build-area
cd build-area
ant change-to -Dsuite=reporting
ant compile
```

WebView is part of the *reporting* suite, so if you install this suite, you can run WebView. You can also add WebView to another suite by adding the following to `modules.txt`:

```
web-view https://github.com/Kepler-Project/web-view.git
```

CONFIGURATION

The configuration file is in `web-view/resources/configurations/configuration.xml`. This section describes the configuration parameters in this file.

2.1 Configuration Parameters

2.1.1 daemon

If `true`, then Kepler does not launch GUI editor but waits for REST and websocket requests. Otherwise (`false`), Kepler starts normally.

2.1.2 port

Port to listen on for requests.

2.1.3 startServer

`true` or `false`: if WebView should be started.

2.2 Default config file

```
1 <?xml version="1.0"?>
2 <config>
3
4   <server>
5     <startServer>false</startServer>
6     <daemon>false</daemon>
7     <port>9122</port>
8     <rootDir></rootDir>
9     <logPath></logPath>
10    <instances>1</instances>
11    <appendIndexHtml>true</appendIndexHtml>
12    <workerThreads>20</workerThreads>
13    <allowWorkflowDownloads>false</allowWorkflowDownloads>
14    <metadataFile></metadataFile>
15
```

(continues on next page)

```
16 <!-- session timeout if not accessed in milliseconds -->
17 <sessionTimeout>86400000</sessionTimeout>
18
19 <!-- workflow execution timeout -->
20 <workflowTimeout>600000</workflowTimeout>

124
125 </config>
```

RUNNING

WebView can be run from the command line, e.g.:

```
./kepler.sh -wvport 10151 -wvd
```

The command line arguments are:

-wvport	Web-view server port number. (default = 9122)
-wvroot	Web-view server root directory. (default = web-view/resources/html)
-wvnum	Number of web-view server instances. (default = 1)
-wv	Start web-view server.
-wvd	Run web-view server as daemon.
